☒ Examiner's Statement of Reasons for Allowance

Art Unit:

DETAILED ACTION

1. The following is an examiner's statement of reasons for allowance:

The claims are drawn to methods of PCR amplification wherein the target is first separated from the sample by using a support that binds to the target polynucleotide and then amplified. In further embodiments of the invention a probe is contacted to a target and the target probe complexes then contacted to the support which binds to the probe and the support and complex are separated from the medium, The probe target complex is then leashed into a second medium and substantially separated from the support and the target is subsequently amplified..The instant application has priority to 10/23/86

The closest prior art is Vary et al and Henson et al. Vary et al teaches a method for amplifying and detecting a target polynucleotide in a sample comprising amplifying the target polynucleotide by primer extension, immobilizing the amplified polynucleotide on a support , separating the amplified polynucleotide and detecting said polynucleotide. Vary et al does not teach binding a target polynucleotide to the support prior to amplification and does not teach retrievable supports. Henson et a teaches general methods of isolating a target sequence of interest from a sample by immobilization onto a solid support and that the order of reaction

between a single stranded nucleic acid and a probe and a support may be varied according to experimental needs. However, the art at the time of filing did not recognize that the efficiency of PCR amplification would decrease due to the presence of contaminants in a sample and therefore provided no motivation to purify a target sample from a heterogenous sample of nucleic acids prior to amplification. Having not recognized the problem, applicant's solution therefore, while utilizing routine methodology to modify PCR amplification techniques, would not have been obvious at the time that the invention was made. The Declaration of Dr. David Pershing, further supports this conclusion as providing further evidence concerning the skill of the art at the time of filing, attesting that one of skill in the art would likely stay away from combining a hybridization capture method with a PCR method since one would not be motivated to provide a method with the potential to lose target nucleic acids prior to amplification.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
